Initial Configuration

If you run Gitea inside Docker, please read the documentation before changing any settings.

Database Settings

Gitea requires MySQL, PostgreSQL, MSSQL, SQLite3 or TiDB (MySQL protocol).

Database Type *	PostgreSQL
Host *	db:5432
Username *	gitea
Password *	•••••
Database Name *	gitea
SSL *	Disable
Schema	

Leave blank for database default ("public").

General Settings

Site Title *	Gitea: Git with a cup of tea

Optional Settings

▶ Email Settings

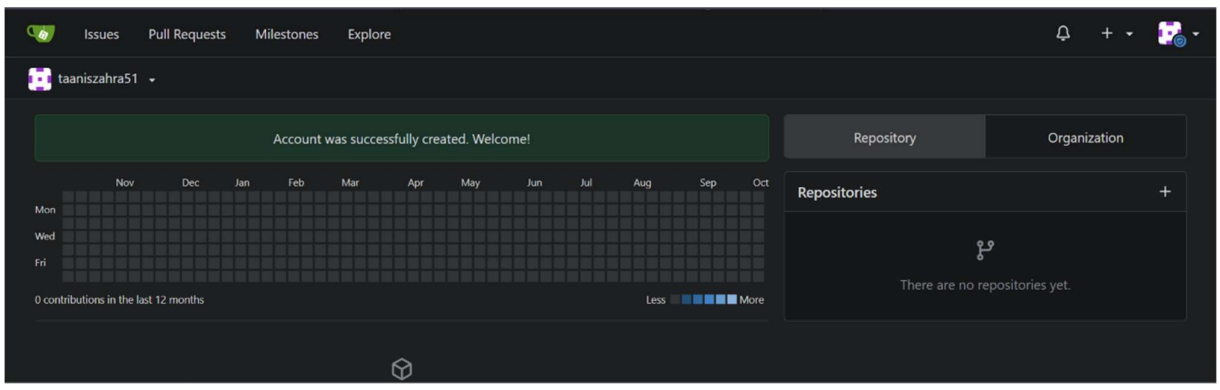

▶ Server and Third-Party Service Settings

▶ Administrator Account Settings

These configuration options will be written into: /data/gitea/conf/app.ini

To fine tune more details: edit the configuration file after installation. Reference: app.example.ini.

Install Gitea

New Repository

A repository contains all project files, including revision history. Already hosting one elsewhere? Migrate repository.

Owner * taaniszahra51

Some organizations may not show up in the dropdown due to a maximum repository count limit.

Repository Name * Assignment01

Good repository names use short, memorable and unique keywords. A repository named ".profile" or ".profile-private" could be used to add a README.md for the user/organization profile.

Visibility ☐ Make repository private

Only the owner or the organization members if they have rights, will be able to see it.

Description Cloud Computing Assignment 01 BSSE-V

Template Select a template.

Issue Labels Select an issue label set.

.gitignore Select .gitignore templates.

Choose which files not to track from a list of templates for common languages. Typical artifacts generated by each language's build tools are included on .gitignore by default.

License Select a license file.

A license governs what others can and can't do with your code. Not sure which one is right for your project? See Choose a license.

README Default

This is the place where you can write a complete description for your project.

☐ Initialize Repository (Adds .gitignore, License and README)

Default Branch main

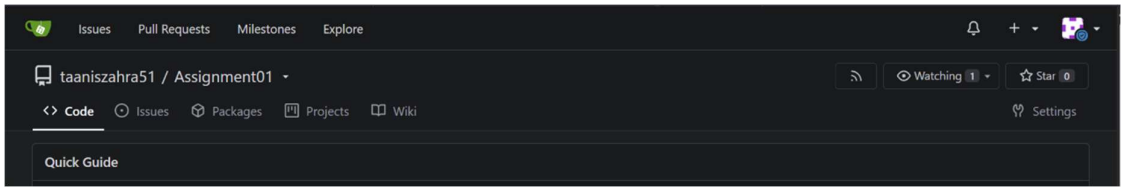

The default branch is the base branch for pull requests and code commits.

Object Format sha1

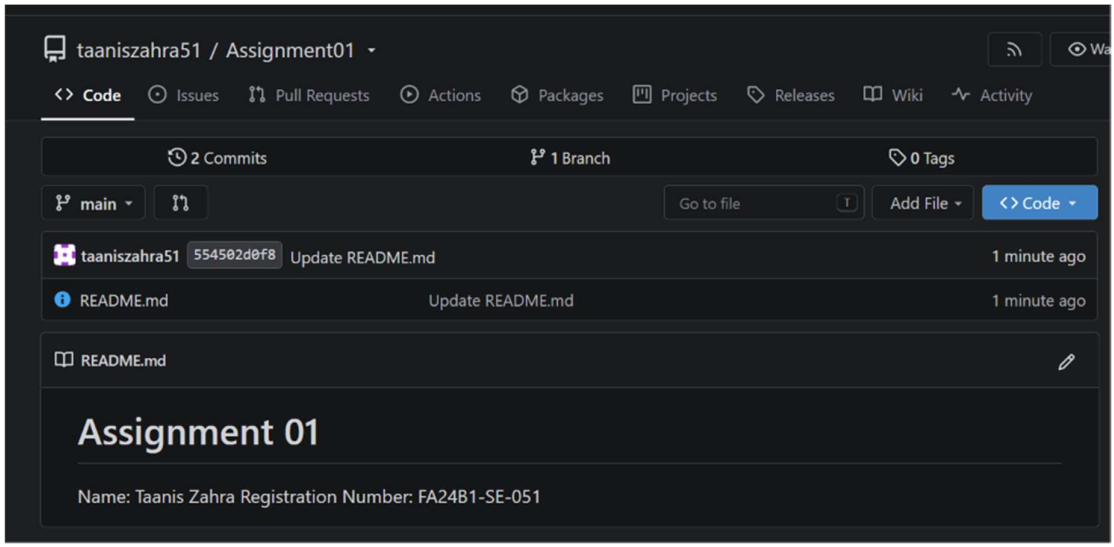

Object format of the repository. Cannot be changed later. SHA1 is most compatible.

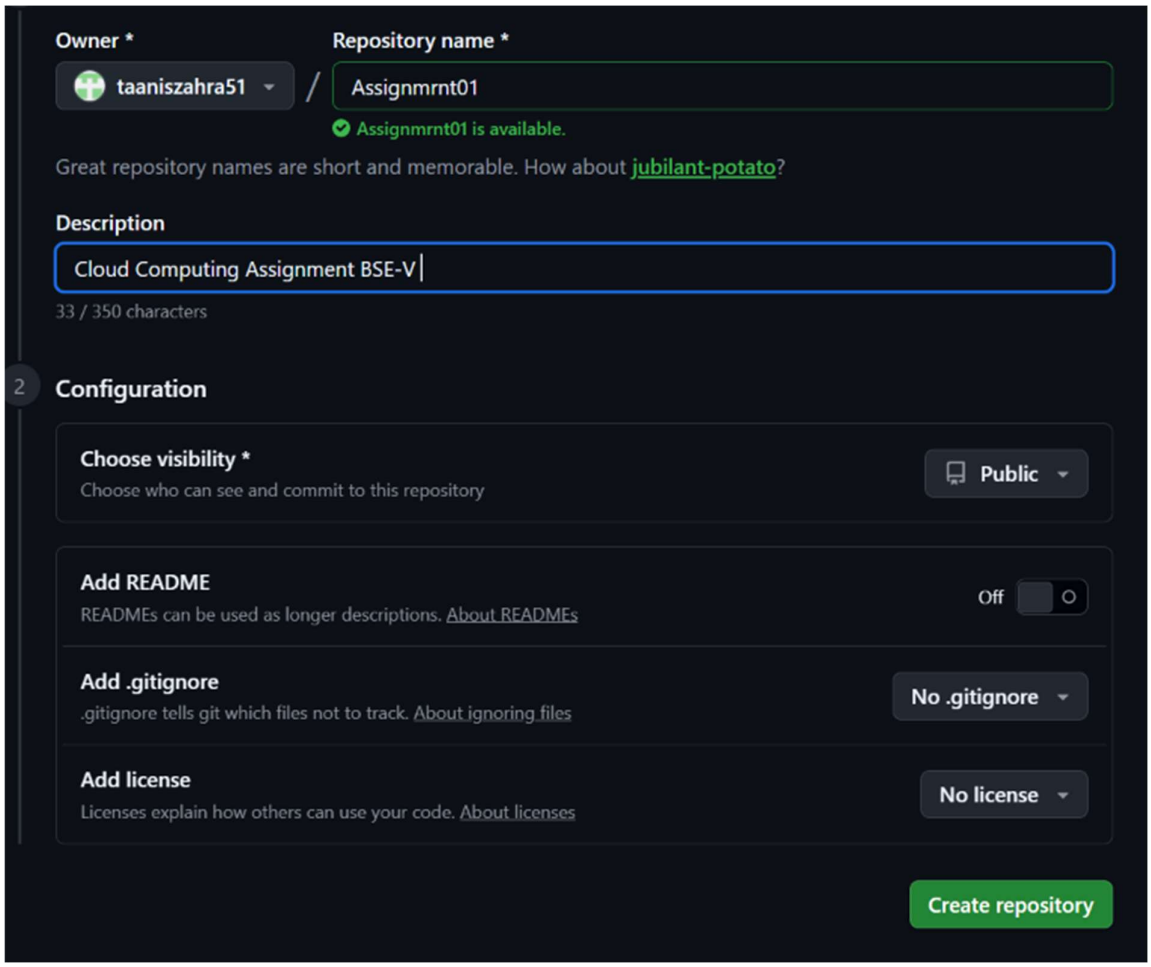

Template ☐ Make repository a template
